

In order to ensure the health and safety of our employees and to conform to state law, we now require that all pumps sent in for repair and evaluation are flushed and neutralized. We ask that all customers provide an MSDS sheet for the products they are pumping. If it is the same product all the time, you will only need to provide this information once. We cannot accept any pump containing a hazardous material.

Attached is a repair/evaluation sheet. To help avoid any delays, please fill out as much information as possible. Once all information has been filled in (Leave Tag Number blank), sign and date the bottom of the form. Your signature states that the pump has been flushed and neutralized, and that the product listed is, to the best of your knowledge, the actual product being pumped.

You may either fax, e-mail or send the completed form, along with a complete MSDS, with your pump at drop-off time. By providing us with this information, you are helping us to keep our employees safe, the environment clean, and a better understanding of the actual nature of your pumps failure. Should you have any question, please feel free to contact our office.
